

Template 02

Quick guide for PSE users

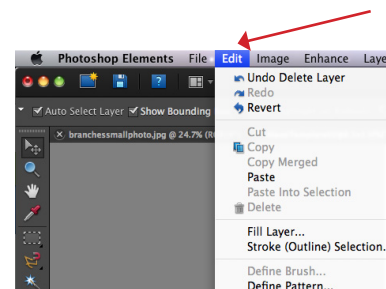

The names of the files which are open (here, the template and the two photos) show up as tabs in some versions of PSE. If you click on a tab, it will open the file on the main screen.

In some versions of PSE, the Layers panel moves. Click on the thin black strip at the top of the panel and drag it to wherever you like it.

In some versions of PSE your files will show up as miniature files below the screen. The file which is open on the screen will have a blue border around its miniature. You can click on a miniature file and drag into the screen to open it.

EEK! What have I done?

Mistake? Go up to Edit and click Undo (whatever you've just done). Here, I had deleted a layer.
